### *Environmental Health (EH) Research Scan: Aims and Scope*

NCCEH's EH Research Scan aims to expand awareness of topics in environmental health, in line with NCCEH's vision to be the indispensable online resource for environmental health practitioners and policy-makers across Canada. "We focus on health risks associated with the physical environment and identify evidence-based interventions to mitigate those risks." This review is not official or peer reviewed. It does not cover all research, news, and information, and NCCEH is not responsible for the accuracy of the content from media or databases. How to access the items? Click on the link related to each entry and it should take you to the item. Not all links are open access; some are abstract links where paid journal subscription is required.

## EDITOR PICKS

A review of the experimental evidence on the toxicokinetics of carbon monoxide: the potential role of pathophysiology among susceptible groups

Prabjit Barn (pictured on right), Luisa Giles, Marie-Eve Héroux, Tom Kosatsky, 2018

*“Following three fatalities attributed to CO in a long-term care facility (LTCF), we queried whether pathologies other than CVD could alter CO-COHB relationships. Our primary objective was to inform susceptibility-specific modeling that accounts for physiological deficits that may alter CO-COHB relationships, ultimately to better inform CO management in LTCFs.”*

Lead in drinking water: homes and schools [topic page]

National Collaborating Centre for Environmental Health, Feb 2018

*The resources presented here are intended to:*

- *assist public health practitioners in understanding the issues around lead in drinking water;*
- *highlight the approaches taken to addressing lead nation-wide; and*
- *provide practical advice on sampling, testing, and mitigating lead exposure in homes and schools.*

Naturally occurring asbestos in an outdoor setting [field inquiry]

Aroha Miller, Michele Wiens, Feb 2018

*What are the potential public health risks from exposure to naturally occurring asbestos (NOA) in these outdoor settings? What methods are available for sampling airborne NOA in outdoor settings?*

Cannabis legalization and environmental health

Angela Eykelbosh, Jan 2018

*This presentation was part of the NCCEH Environmental Health Seminar Series.*

## EDITOR PICKS, CONTINUED

### Risks and Impacts to First Nations health and the Mount Polley mine tailings dam failure

Shandro et al, 2017 Vol 12(2)

*“This work documents the unidentified and unfulfilled need to ameliorate the extent of emotional trauma prompted by...”*

### Food issues: Notes from the field – Nitro cold brew coffee food safety risks

Lorraine McIntyre, British Columbia Centre for Disease Control, Sep 2017

*“Cold-brew coffee has more risk than hot-brew coffee due to several process factors...”*

### Strengthening surveillance of and response to foodborne diseases

World Health Organization, Nov 2017

*This document includes these stages: Using indicator- and event-based surveillance to detect foodborne events; Investigating foodborne disease outbreaks; Strengthening indicator-based surveillance; Integrating surveillance data to better understand risks across the food chain.*

### Response to Health Canada’s response to the proposed approach to the regulation of cannabis

Canadian Public Health Association, Feb 2018

*This self-directed course was developed for public health inspectors and focuses on micro-, small-, and medium-sized ready-to-eat meat production operations. There are nine modules to complete and the course is free to members of the Canadian Institute of Public Health Inspectors.*
