SUGGESTED TOPICS	Occupation
Best practices for chemical treatment for bedbug infestations in multiple family hotel, dwellings, apartment buildings, and other residential settings	Practitioner
Bleach as a disinfectant/sanitizer on environmental and food contact surfaces; spray application vs wipe and impact to health, THMs; concentrations & contact times for different applications; stability of bleach solutions, e.g., how long to keep a ready-made solution	Practitioner
First Nations	
Human health; risk assessment process	
Climate change and health	
Indoor air quality	
Climate	
Outdoor air quality	
Ensuring effectiveness of delivered programs; quality not quantity, number of inspections	
Chemical contaminants	
Chemical contamination of water (DLEG); large industry (e.g., oil, gas), metals, process of petrol manufacturing	
EIA with human health; pathways; process effects	
Health effects re FM transmissions	
Gender analysis work (currently underway)	
Impact of building code requirements for configuration of stairs	
EMF and mining	Practitioner
Impact of climate change on coastal communities	
Tar sands	
Mould and indoor air
